### Role Mandate

Job Title:	Senior DataOps Engineer
Function/ Directorate:	Data Services / Finance
Dimensions of the job:	No reports
Reports to:	Data Production Manager
Location:	Head Office, Runcorn

---

### Job Summary:

In this highly varied multi-skilled role you will play a leading role in the architecture and creation of solutions across the entire data pipeline, from ingestion, storage, modelling, transfer, hosting, presentation, visualisation, dashboards, analysis and consumption. You will be expected to context-switch and perform various functions across fields of expertise on the data pipeline. You will occasionally be expected to mentor and train other team colleagues and should lead by example with exceptional proactivity, quality standards and work ethic.

---

### Responsibilities :

- Design and build data ingestion, data storage, data processing and data interfaces.
  - Design and build machine-consumable interfaces and other such data integration solutions.
  - Create human-consumable data products in the form of standard reports and occasionally ad hoc reports, using: Fabric; SQL; Power BI and Excel.
  - Creation and maintenance of: Microsoft Fabric pipelines; dataflows; notebooks (Python and Spark); lakehouse and warehouse external tables.
  - Create dataflows, datasets, dashboards and applications in MS Power BI.
  - Maintain: documentation; data dictionary; business glossary; technical documentation; process maps; flowcharts and SOPs.
  - Work collaboratively with business owners and data consumers to thoroughly understand requirements and deliver products.
  - Play a lead role as technical and solution architect.
  - Act as additional quality tester and approver of solutions and products.
-

---
